"Wine" chiller

Clay  
 - soaked in water  
 - chill by evaporating  
 for several hours

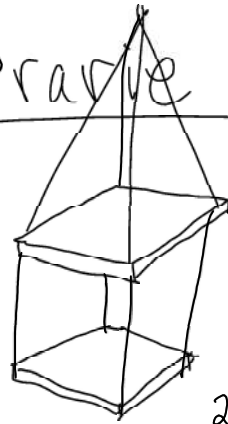

Western Canteen

Blanket material on the outside

1. Insulates to reduce heat transfer
2. When wet it evaporates and somewhat cools the water.

## Pravie Cooler

1. Put a cloth on it to keep flies off of the food

2. Set the cloth wet so that evaporation cools the food.

3. To keep it wet put a bucket of water on top and put the end of the cloth in the water.

## Zeer pot
